energy solutions

Guernsey
energy 

We understand business energy

Switching from oil to gas couldn't be easier. At Guernsey Energy we'll help you make the change so your business can reduce its carbon emissions, become more energy efficient and we'll put you in control of costs with an always on supply that's secure and reliable.

We've been supplying gas to Guernsey and Jersey for over 200 years. Our qualified commercial engineers have helped many businesses across all industries to make the switch to gas. We'll assess your requirements and give you the right solution for your business.

Switch to
the future

Make the switch today, call us on **01481 724811** or visit **guernseyenergy.gg/oil-to-gas**

- ✓ Lower carbon
- ✓ More efficient
- ✓ Less maintenance
- ✓ Stable price
- ✓ Capex support
- ✓ Future-proof

Why switching to gas is the right choice for your business

Cost effective and efficient

Switching to gas brings many benefits. Gas systems require lower maintenance than oil reducing your costs. In addition, changing your energy supply means we overhaul everything. Many businesses who have made the switch have found their energy efficiency is better, saving them money on their heating bills, hot water and cooking.

It's also cheaper to replace your existing oil boiler with either an LPG boiler or a regular boiler. Our bespoke blended business tariffs and payment on an invoice by invoice basis helps your business keep on top of costs and are competitive against volatile oil prices.

Lower your carbon footprint

With **13% lower emission than oil**, switching to gas can help you achieve your businesses Net Zero targets. Islands Energy Group is also working to pave the way for renewable and low carbon gas, ensuring that our energy supply is fit for the future and your investment is secure.

All boilers are future ready, they can take most renewable and low carbon gases and work with hybrid systems such as heat pumps and solar PV, making sure that you have the flexible solution you need to hit your carbon targets and reduce your running costs.

Capex support

We know that making the commitment to change your energy supply is a big decision so we provide capex support* to help you realise the longer term benefits of switching to gas. Our team will assess your requirements and provide a solution for your business, with long term financial support.

* Subject to survey and status

BENEFITS OF GAS

We already help many businesses across the island achieve their energy needs and Net Zero targets with our gas solutions.

13%

Lower carbon emissions than oil

Future proof

technology with systems that already work with heat pumps and solar PV

Cleaner burn so much less local pollution compared to oil

More stable fuel costs than oil

Off-grid solutions

Off-grid properties needing LPG deliveries can opt for metered supply, akin to mains gas

Capex support

and competitive blended tariffs

Mains network

No need to order and refill oil tanks

Maintenance is easier and more cost effective

93%

efficiency on our reliable boilers, which are less carbon-intensive than oil boilers

FULLY INTEGRATED SERVICES

How we'll support your business

Our dedicated commercial team will make it easy to upgrade to an energy-efficient and high-performing gas system, which is easy to service and maintain. If you are still using a commercial oil-fired system for heating and hot water, then switching from oil to gas could reduce your costs, save you space and help significantly reduce your emissions.

Site survey

Our qualified engineers will check the efficiency of your current system before designing a bespoke solution to suit your needs.

Savings

Before any work is carried out, we'll show you exactly what cost and carbon savings you can expect from your new system.

Flexible finance

We'll provide a full range of flexible finance options, ensuring you benefit from continued competitive pricing. With our capex support programme* we can help you manage the costs of switching over the long term.

Installation

We'll take care of everything, from civil works through to installation and commissioning.

Gas for any business

Our commercial teams have been working with businesses and industry for over 200 years, making sure that we supply the right solution. With expertise in the Hospitality, Catering, Farming, Care Home, School and many other sectors, we've helped many businesses to realise the benefits of switching to gas. Our teams take care of everything from initial surveys all the way through to installation and beyond.

* Subject to site survey.

Hamworthy

Purewell VariHeat boilers

The Purewell VariHeat boilers are the highest efficiency condensing cast iron boilers available in the UK and Channel Islands. Tough, compact, powerful, and built to last, the Purewell VariHeat retains all the benefits of traditional boilers, but with vastly improved performance to meet the efficiency requirements for modern day systems.

10
YEAR
WARRANTY

- + Proven reliability with a 10-year heat exchanger warranty
- + Highly efficient, offering up to 96% gross seasonal efficiency, reducing carbon emissions and saving money on fuel bills
- + Simple to operate and maintain, saving on time and money
- + Can be disassembled for rooms with difficult access
- + Extensive backup and support from our team of experienced engineers
- + Easy-access servicing

Sunamp

Hot water storage
for less space

A SUSTAINED WITH TECHNOLOGY
A SUNAMP THERMAL BATTERY PLENTIGRADE

SUNAMP

When you're making the switch to gas it's the perfect opportunity to look at other elements of your heating and hot water system. Island Energy is a trusted Sunamp partner in Jersey and Guernsey. Sunamp (thermal batteries) is the perfect product for property developers, or any business looking to save space, reduce carbon emissions and reduce ongoing costs with their hot water system.

Sunamp thermal batteries store heat for hot water and deliver it on demand. Up to 4 x more compact than a traditional hot water cylinder and with lower heat losses they are easy to install and are compatible with a wide choice of energy sources including heat pumps, solar PV systems and our boilers.

VIESSMANN

Combined Heat and Power (CHP)

A combined heat and power solution (CHP) that could save you up to 40% on your energy costs.

A CHP solution produces heat and power (electricity) onsite from a single fuel source. It captures and utilises waste heat to achieve efficiencies of up to 80%, reducing energy costs and environmental impact.

Our commercial teams at Guernsey Energy can help you realise lower carbon emissions, reduce your costs, and become more energy efficient.
