- ✓ Lower carbon
- ✓ More efficient
- ✓ Less maintenance
- ✓ Stable price
- ✓ Capex support
- ✓ Future-proof

# Why switching to gas is the right choice for your business

## Cost effective and efficient

Switching to gas brings many benefits. Gas systems require lower maintenance than oil, reducing your costs. Many businesses who have made the switch have found their energy efficiency is better, saving them money on their heating bills, hot water and cooking.

It's also cheaper to replace your existing oil boiler with a gas boiler. Our bespoke blended business tariffs and payment on an invoice by invoice basis helps your business keep on top of costs and are competitive against volatile oil prices.

## Lower your carbon footprint

With **26% lower emission than oil**, switching to gas can help you achieve your businesses Net Zero targets. Islands Energy Group is also working to pave the way for renewable and low carbon gas, ensuring that our energy supply is fit for the future and your investment is secure.

All boilers are future ready, they can take most renewable and low carbon gases and work with hybrid systems such as heat pumps and solar PV, making sure that you have the flexible solution you need to hit your carbon targets and reduce your running costs.

## Capex support

We know that making the commitment to change your energy supply is a big decision so we provide capex support\* to help you realise the longer term benefits of switching to gas. Our team will assess your requirements and provide solutions for your business, with long term financial support.

\* Subject to survey and status

## BENEFITS OF GAS

We already help many businesses across the island achieve their energy needs and Net Zero targets with our gas solutions.

**26%**

Lower carbon emissions than oil

**Future proof**

technology with systems that already work with heat pumps and solar PV

Cleaner burn so much less local pollution compared to oil

**More stable fuel costs than oil**

## Off-grid solutions

Off-grid properties needing LPG deliveries can opt for metered supply, akin to mains gas

## Capex support

and competitive blended tariffs

## Mains network

No need to order and refill oil tanks

Maintenance is easier and more cost effective

# 93%

efficiency on our reliable boilers, which are less carbon-intensive than oil boilers

## FULLY INTEGRATED SERVICES
